Employee Management

Overview

The **Employee Management** collection provides a comprehensive set of API requests for managing an organization's workforce and related resources. It covers the full lifecycle of employee data and supporting entities, organized into the following functional groups:

Folders

- **Auth** — Handles user authentication flows including a welcome/health check, user registration, login, and logout. Token-based authentication is used across the collection via the `token` environment variable.
- **Employees** — Full CRUD operations for employee records: retrieve a complete employee profile, list all employees, fetch a single employee, add a new employee, update an existing employee, and delete an employee.
- **Departments** — Manage organizational departments with endpoints to list all departments, retrieve a specific department, and create, update, or delete a department.
- **Roles** — Manage job roles within the organization, including listing, retrieving, creating, updating, and deleting roles.
- **Attendance** — Track employee attendance records with support for listing, retrieving, creating, updating, and deleting attendance entries.
- **Leaves** — Manage employee leave requests, covering listing, retrieving, creating, updating, and deleting leave records.
- **Admin** — Administrative endpoints for user management, including listing all users, retrieving a specific user, viewing a dashboard summary, updating a user, and deleting a user.
- **Basic Analytics** — Aggregated reporting endpoints providing summaries for departments, attendance, and leaves to support operational insights.

Notes

- A collection-level test script validates that every response returns a valid HTTP status code (100–599).
- The `base_url` and `token` variables (defined in the **EM API** environment) are used throughout the collection to configure the base URL and authorization token.

Auth

GET Welcome

http://127.0.0.1:5000

POST Register

/register

HEADERS

x-access-token

Body urlencoded

username	new user
email	newuser@gmail.com
password	password
